

Deep-dive into sustainable farm dam practices

Speaker: Martino Malerba (PhD)

Martino leads a research team at Deakin University, focusing on the sustainable management of freshwater systems, including farm dams. He is known for his engaging and easy-to-understand presentations, making complex science accessible to everyone.

What to expect

In his seminars, Martino simplifies the latest science on farm dam management. You'll learn new ideas to:

- ✓ Improve Water Quality
- ✓ Enhance Biodiversity
- ✓ Protect the Environment

Sustainable farming with financial benefits

Martino's ultimate goal is to help create alternative financial methods to help farmers cover the costs of enhancing their dams. He collaborates with the Federal government to help develop methods applied to farm dams to generate:

- ✓ **Carbon Credits** through the ACCU scheme
- ✓ **Biodiversity Credits** through the Nature Repair Market

His work aims to develop a future where farm dam becomes an additional source of income while improving farming operations and helping the environment.

Martino's seminars are opportunities to learn, connect with fellow farmers, and take steps toward a sustainable and profitable farming future.
